**Materials:**

- Gathering: copies of fortune tellers, scissors
- Opening: flag
- Project/Activity: Review sheets
- Game/Song: questions for first aid baseball, base sheets
- Closing: none
- Home assignments: See home assignment sheet

**Advancement:**

- **Tiger:** Tiger Smart & Safe 1C, 2A, 2B
- **Wolf:** Call of the Wild 5C
- **Bear:** Grin and Bear It 4
- **Webelos:** First Responder 1, 3, 4, 5, 7
- **Arrow of Light:** None
First Aid Fortune Tellers

Materials:
Copies of First Aid Fortune Tellers (one type for Tiger/Wolf/Bear, one type for Webelos Scouts)
Scissors
Crayons/Markers

Instructions:
1. Let Cub Scouts cut out, color and fold their fortune tellers.
2. Have each Cub Scout go around and ask the first aid questions – see who can answer all of the right. What questions did the Cub Scouts have some difficulty answering? Use time this month to review first aid for all of the Cub Scouts.
If someone is badly injured, should you move them? Why or why not?

No. You might make their injury worse if you move them.

If there is fire and smoke in your house, what is the best way to get out?

Crawl along the floor to avoid breathing smoke.

What do you do if your clothes catch on fire?

Stop, drop, and roll!

What are the courage steps?

Be brave, Be calm, Be clear, Be careful.

What do you do if you get a small cut on your finger?

Tell a grown-up, let it bleed a little, wash it with soap and water, cover it with an adhesive bandage.

What is one way we can stop spreading a cold?

Stay away from people, get some rest, wash your hands, turn your head away from other when you cough or sneeze — cover your mouth when you cough or sneeze.

Should we always wear a helmet when we ride a bike?

Yes.

How can you get help for an injured person?

Find an adult to help. Call 911.

First Aid Fortune Teller – Tiger, Wolf, Bear

1. Cut around outside of square.
2. Fold in half and in half again
3. Open out, turn over so top is blank and then fold each corner into the middle
4. Turn over and repeat
5. Turn over so you can see the pictures
6. Slide your thumb and your finger behind 2 of the pictures and press together so they bend round and touch
7. Turn over and repeat with the thumb and finger of the other hand for the other two pictures
8. All the pictures should now be at the front with centres touching and you are ready to use your fortune teller!
What is the buddy system?
When you swim you have a buddy that is at the same swimming level that you are. Stay with your buddy to be safe.

What first aid should we give for choking?
The Heimlich Maneuver.

What is first aid?
First Aid is what we do first to help a person with a serious injury or illness.

How can you be safe in a car even though you don’t drive a car?
Use a seat belt, don’t talk to the driver in heavy traffic, lock the doors, etc.

Should we always wear a helmet when we ride a bike?
Yes

What first aid do we give for a nosebleed?
Have the person sit up, pinch the nostrils and lean forward.

What are the courage steps?
Be strong, Be calm, Be clear, Be careful.

How many kinds or degrees of burns are there?
3 – First degree, second degree and third degree burns are degrees of burns.

First Aid Fortune Teller - Webelos

1. Cut around outside of square.
2. Fold in half and in half again
3. Open out, turn over so top is blank and then fold each corner into the middle
4. Turn over and repeat
5. Turn over so you can see the pictures
6. Slide your thumb and your finger behind 2 of the pictures and press together so they bend round and touch
7. Turn over and repeat with the thumb and finger of the other hand for the other two pictures
8. All the pictures should now be at the front with centres touching and you are ready to use your fortune teller!
First Aid Opening

Materials:
Flag

Cubmaster:
Cub Scouts and Webelos Scouts should know a little bit of first aid. First Aid is the immediate or first help that we can give to someone else when they are hurt. It’s important to know the right ways to help right away.

The **first things** we have to do is to **stay calm and think**.
The **second thing** is to **send for help**.
The **third thing** to remember is to **not move anyone** unless you have to.

We will learn more things to do, but we have to be brave and strong to be able to do first aid. Sometimes it can be scary to help someone. In an emergency it can be hard to be brave and strong. We have to be brave and strong at other times too.

What other times do we need to be brave and strong? [See what answers the Cub Scouts give, you can mention standing up to a bully, avoiding fights, being fair, not stealing or cheating when tempted, etc.]

We can be brave and strong and we can help other people.

Let’s say the Pledge of Allegiance and the Scout Oath together.
Carnival Evaluation

Materials:
Paper/pencil for leader to write down feedback

Cubmaster or Den Leader:

In February we had our pack carnival and we played many fun games! [Mention some of these games that were played to help them remember.]

Was that a fun event? Did everyone work together to make it a fun Cub Scout meeting? What did you like about it?

If we had a carnival next year, what games would you want to play again? What games would you not want to play again?

How can we make our carnival better?

[Listen to all of their answers and then quickly summarize the like and concerns of the Cub Scouts. Write down their replies as necessary. Council will like hearing the feedback from the Cub Scouts.]
First Aid & Safety Review – Tiger, Wolf, Bear

Review the following:

Wash your hands:
1. Use warm water to wet your hands.
2. Use soap (any kind is fine).
3. Work the soap into a lather on both sides of your hands. Remember to wash your wrists, between your fingers, and around your fingernails.
4. Wash for 10-15 seconds (about the time it takes to sing “Happy Birthday” twice) and then rinse off the soap.

911 Safety Quiz Review:
1. Should you call 911 if you see someone breaking into a car? YES!
2. Should you call 911 if your brother or sister breaks your toy? NO!
3. If you are hiking with a friend and he falls and hurts himself very badly, should you call 911? YES!
4. If your friend falls down and scrapes his elbow, should you call 911? NO!
5. If you see fire or smell smoke, should you call 911? YES!
6. Should you call 911 if you need help with a school project? NO!
7. Should you call 911 if a stranger is following you? YES!
8. Should you call 911 if you see a car accident where someone is hurt? YES!
9. Should you call 911 if your parents put you in time out? NO!

A Scout is trustworthy. Calling 911 is serious! A Scout would never call 911 unless it is a real emergency.
Stop, Drop and Roll:
If your clothing catches on fire, you should “Stop, Drop, and Roll.”

1. STOP moving. Moving will make the fire grow.
2. DROP to the floor.
3. ROLL on the ground. Rolling will put out the fire.

Have the Cub Scouts practice how to Stop, Drop and Roll.

Roll Someone Else in a Blanket:
Rolling a person in a blanket can also put out a fire. If you know the safe way to roll someone in a blanket, you can be a good helper by telling an adult how to do it in a real emergency. Practice the steps below.

Sneezing
Sneezes sound funny, but they are actually a powerful tool your body uses to get rid of dust or other things that are irritating your body. Sneezing can also spread germs quickly and powerfully. Because a Scout is courteous, always protect the people around you be sneezing into a tissue or the crook of your elbow.
**First Aid & Safety Review – Webelos Scouts**

**Materials:**
As the teacher and leader – please familiarize yourself with this information – it is taken directly from the Webelos Handbook under the First Responder Adventure.

**Instructions:**
For this activity, this will mostly be a role play of the First Responder Adventure requirements – 1, 3, 4, 5. There are requirements where the boys need to demonstrate and show that they know what they need to do in emergency situations.

For review, ask the Cub Scouts what they would do and what they can teach everyone as you go through these requirements. Let them help explain and demonstrate.

**First Responder 1 – Explain what first aid is. Tell what you should do after an accident.**

When people get hurt, they need help right away. That help is called first aid. It is the quick help someone receives before professional help can arrive.

First aid is what happens when you remove a tick that’s burrowed into your skin. First aid is what happens when, after you scrape your knee, your mom cleans and bandages the wound. First aid is what happens when a server in a restaurant saves a choking victim by giving abdominal thrusts.

If you come across an accident or medical emergency, do these things:
- Check. Make sure the scene is safe. You can’t help anyone if you become a victim yourself.
- Calm down and think. Assess the situation and decide what needs to be done. Staying calm may be hard to do, but it’s important. The victim will feel better knowing you are in control, and you will be able to make better decisions than if you were panicked.
- Call. If the victim seems badly hurt, send someone to call for medical help. If no one is there to do that, call for help, and offer to assist the victim.
- Care. Explain that you know first aid, and get permission to treat the victim before doing anything else.
First Responder 3 – Show how to help a choking victim.
When you see a person holding his hands to his throat and turning blue, **ask if he is choking**. If he can speak, cough or breathe, encourage him to try to cough up what he has swallowed. If not, call 911, or ask a bystander to call 911. Tell the person that you know first aid, and ask if you can help.

**If the answer is yes, give back blows:**
-Give five back blows between the shoulder blades with the heel of your hand.

**If the object is not removed, give abdominal thrusts:**
-Position yourself behind the person, and reach your arms around his or her waist.
-Make a fist with one hand just above the person’s belly button. Cover the fist with your other hand.
-Make a series of five quick thrusts inward and upward to force air from the lungs. (Pretend like you are trying to pick the person up.)
-Alternate between abdominal thrusts and back blows until the object is dislodged, the person becomes unconscious, or medical help arrives.

First Responder 4 – Show how to treat for shock.
-When a person is injured or under great stress, the circulatory system might not provide enough blood to all parts of the body. That’s call shock. The person will feel weak. The face may get pale. The skin will feel cold and clammy. He or she may shiver or vomit.
-Call 911 for emergency help immediately
-Have the person lie down on his or her back.
-Raise the feet slightly, unless you think there are injuries to the head, neck, back, hips, or legs. If you don’t know, have the person lie flat.
-If the person is not awake, turn him or her on the side. But first, be sure the person has no head, neck or back injuries.
-If the weather is cool, cover the person with a sheet. If it’s hot, don’t.
-Do not give the person anything to eat or drink.
-Stay with the person until help arrives.
First Responder 5 – Demonstrate that you know how to treat the following: cuts and scratches, burns and scalds, sunburn, blisters on the hand and foot, tick bites, bites and stings, venomous snakebite, nosebleed, and frostbite. (Webelos Handbook pages 75-81)

Cuts and Scratches
Cuts and scratches are opening in skin. They can let in germs that cause infections.

When treating cuts and scratches, be sure to wear disposable, latex-free gloves and eye protection. Wash your hands thoroughly with soap and water after treating any wounds. For small wounds, wash the wound with soap and water. Then apply antibiotic ointment to help prevent infection if you have the victim’s permission and know that he or she doesn’t have any allergy to the medicine. Keep the wound clean with an adhesive bandage. Change the bandage as often as needed, but at least once daily.

For larger cuts, first stop the bleeding by applying direct pressure. Keep the wound as clean as possible to limit infection. Cover an open wound with a sterile gauze pad or a clean cloth folded into a pad. Hold the pad in place with tape or a bandage made out of a neckerchief. Any bandage should be loose enough that you can slide two fingers between it and a person’s body. An adult leader should evaluate any large wound. Once the bleeding has stopped, clean the wound as described above.

Burns and Scalds
Burns and scalds range from simple sunburn to very dangerous third-degree burns. What kind of first aid to give depends on the severity of the burn.

First Degree Burns
First-degree burns only affect the outer surface of the skin, which gets red and sore. Put the burned area in cold water until the pain stops. If you don’t have any water, cover the burn with a clean, dry, loose dressing.

Second-Degree Burns
With second degree burns, which are also call partial-thickness burns, blisters form on the skin. Put the burned area in cold water until the pain stops. Gently dry the burned area. Cover it with a sterile gauze pad, and hold the pad loosely in place with a bandage. Be careful not to break open blisters, which could cause infection. Don’t apply creams, ointments or sprays. If needed, treat for shock. Second-degree burns should be evaluated by an adult to determine the need for additional medical help.

Third-Degree Burns
With third-degree burns, which are also called full-thickness burns, the skin may be burned
away, and the flesh may be charred. The victim may feel no pain because nerve endings have been burned. You will definitely need to call 911 or local emergency responders and have an adult evaluate the situation. Don’t remove clothing from around the burn. Wrap the victim in a clean sheet. Cover him or her with blankets if the weather is cool. Treat for shock if needed, and stay with the victim until professional medical help arrives.

**Sunburn**

Sunburn is a common injury among people who enjoy being outdoors. Most sunburns are first-degree burns, although severe sunburn is a second-degree burn and should receive prompt medical attention. All sunburns are dangerous because they can lead to long-term skin damage and even skin cancer when you get older.

You can prevent sunburn by using plenty of broad-spectrum sunscreen with a sun protection factor (SPF) of at least 30. Put it on 20 minutes before you go outside and every two hours while you are outside. Reapply it after swimming or if you are sweating a lot. A broad-brimmed hat, long-sleeved shirt, and long pants will give you even more protection.

**Blisters on the Hand and Foot**

Blisters are pockets of fluid that form as the skin’s way of protecting itself from friction. Blisters on the feet are common injuries among hikers. You can avoid getting blisters by wearing shoes or boots that fit well, by changing your socks if they become sweaty or wet, and by paying attention to how your feet feel. A hot spot is a warning that a blister might be forming. As soon as you notice it, cover the hot spot with moleskin. If a blister forms, you can protect it with a doughnut bandage. To make one, cut moleskin in the shape of a doughnut, and fit it around the blister. Shape several more doughnuts, and stack them on top of the first. Cover with an adhesive bandage.

**Tick Bites**

Ticks are small, hard-shelled arachnids that bury their heads in your skin. Protect yourself whenever you’re in tick-infested woodlands and fields by wearing long pants and a long-sleeved shirt. Button your collar, and tuck your pant legs into your socks.

Inspect yourself daily, especially the warm and hairy parts of your body, and immediately remove any ticks you find. If a tick has attached itself, ask an adult to help you. The adult will grasp the tick with tweezers close to the skin and gently pull until it comes loose. It’s important not to squeeze, twist or jerk the tick, which could leave its mouth parts in the skin. Wash the wound with soap and water, and apply antibiotic ointment. After dealing with a tick, thoroughly wash your hands. If you develop a rash or flulike symptoms or otherwise feel ill in the next days or weeks after being bitten, talk to your doctor.
**Bee and Wasp Stings**
Scrape away a bee or wasp stinger with the edge of a card or ask an adult to help. Another method is to put a piece of tape on top of the sting to pull out the stinger. Don’t try to squeeze it out. That will force more venom into the skin from the sac attached to the stinger. An ice pack might reduce pain and swelling. Some people have severe allergies to bee and wasp stings. If someone has trouble breathing after being stung or feels his or her throat swelling or closing up, seek medical help immediately and alert an adult. Find out if the person is carrying a kit for treating anaphylactic shock, and help him or her administer the medication.

**Chigger Bites**
Chiggers are almost invisible. Their bites cause itching and small welts. Try not to scratch chigger bites. You might find some relief by covering chigger bites with calamine lotion or hydrocortisone cream.

**Spider Bites**
Only a few types of spiders’ bites cause serious reactions. Victims of these spider bites should be treated for shock and seen by a doctor as soon as possible. When possible, try to identify the spider, or take the dead spider to the physician’s office. Be sure that you don’t put yourself in danger to do so.

The bite of a female black widow spider can cause redness and pain at the wound site. The victim might suffer sweating, nausea and vomiting, stomach pain and cramps, severe muscle pain and spasms and shock. Breathing might become difficult. The bite of a brown recluse spider doesn’t always hurt right away, but within two to eight hours there can be pain, redness, and swelling at the wound. An open sore is likely to develop. The victim might suffer fever, chills, nausea, vomiting, joint pain, and a faint rash.

**Snakebite**
Snakes are common in many parts of the country, but bites from them are rare. Snakes try to avoid humans and normally strike only when they sense danger. Snakebites seldom result in death.

Use a hiking stick to poke among stones and brush ahead of you when you walk through areas where snakes are common. Remember to stay on the trails. Watch where you put your hands as you collect firewood or climb over rocks and logs.

The bite of a non-venomous snake causes only minor puncture wounds. You can treat these like other puncture wounds; just wash with soap and water, then apply antibiotic ointment and an
adhesive bandage. Before applying medicine, put on disposable, non-latex gloves; ask about any drug allergies; and get permission. Get medical attention if you see signs of an infection.

The bite of a venomous snake can cause sharp, burning pain. The area around the bite might swell and become discolored.

If you think a person has been bitten by a venomous snake, call for help, and follow these steps:
- Keep the person calm and still
- Do not let the victim walk unless it is unavoidable.
- Immobilize the part of the body that was bitten, and position it below the level of the heart.
- Remove any rings or jewelry from the bitten extremity.
- Clean the wound with antiseptic, and cover it with a clean bandage.
- Don’t apply ice or a tourniquet.
- Don’t cut the wound or try to suck out the venom.
- Don’t give the victim caffeine or alcohol.
- Try to remember the snake’s shape and color pattern so you can describe it later, but don’t try to capture it.

**Nosebleed**
A nosebleed can look bad, but it will usually stop in just a few minutes. Have the victim sit up and lean forward to prevent blood from draining into the throat. Pinch the nostrils together for 10 minutes to maintain pressure on the flow and stop the bleeding. Apply a cool, wet cloth to the victim’s nose and face above where you are pinching. (As always, wear latex-free, disposable gloves.) Watch for symptoms of shock and treat as needed. Call for help if the bleeding doesn’t stop after 15 minutes.

**Frostbite**
Frostbite happens when the skin gets cold enough to freeze. A sure sign of frostbite is grayish-white patches on the skin. Some victims will complain that their ears, nose, fingers, fingers or feet feel painful and then numb. Others won’t notice anything.

If you suspect frostbite, get the person into a tent or building, then gently warm the affected area and keep it warm. If an ear or cheek is frozen, remove your glove and warm the injury with the palm of your hand. Slip a frostbitten hand under your clothing, and tuck it beneath an armpit. Treat frozen toes by putting the victim’s bare feet against the warm skin of another person.

You can also warm a frozen part by holding it in warm – not hot – running water. Have the patient exercise injured fingers or toes, and don’t let the injured area freeze again. Get the victim to a doctor.
First Aid Baseball

Materials:
Question cards
Base sheets (Home plate, 1\textsuperscript{st} base, 2\textsuperscript{nd} base, 3\textsuperscript{rd} base – placed on the floor as a baseball diamond)
Pencil and paper (scorekeeping)

Instructions:
Divide the Cub Scouts into equal (or mostly equal) teams. For every two teams playing you will also need an umpire (to determine if an answer is right or wrong and to determine advancing to bases in a partial answer situation) and a scorekeeper. The umpire and scorekeeper could be the same person.

Game Play:
1. Determine which team will bat (or answer questions) first.
2. The team up to bat first stands behind home plate. The first player in line bats first.
3. The first player chooses a card (from the Tiger/Wolf/Bear question stack or from the Webelos question stack) without reading it and hands the card to the umpire.
4. The umpire reads the question on the card to the batter.
5. The batter does his best to answer the question without any help from other team members.
6. The umpire decides if the question has been answered correctly or not. All decisions of the umpire are final. Some of the questions have multiple part answers. The umpire can decide to let the runner advance a base or two if he gets part of the answer.
7. If the batter answers the question correctly, the batter advances the number of bases indicated by the umpire. If he answers incorrectly – the scorekeeper records an out for the batting team and the next player comes to “bat”.
8. If the batter answers a question correctly and there is another player on base ahead of him, everyone on base advances the number of bases indicated on the card.
9. When a player reaches home plate, the scorekeeper records a run for the team.
10. When a team has three outs – then it is the other team’s turn to bat.
11. Play for a certain amount of innings or for a certain amount of time. Make sure that each team bats in each inning played.
12. The team with the most runs scored, wins the game!

**Variations:** This game can be played with any type of question – not just first aid questions.
Home

Plate
1st Base
2nd Base
3rd Base
Tell or demonstrate the best way to sneeze.
Answer: Sneeze into a tissue or into the crook of your elbow.
Double – Advance two bases.

Should you use soap when you wash your hands?
Answer: Yes
Single – Advance one base.

How can you get help? Who can you call?
Answer: You can contact a grown-up, and you can call 911.
Double – Advance two bases.

What should you do if someone’s clothes catch on fire?
Answer: Have them stop. Drop to the ground. Roll and cover your face.
Triple – Advance three bases.

What should you do if your house catches on fire?
Answer: -Get out of the house – crawl on the floor to keep from breathing smoke. -Don’t try to put the fire out. -Call the fire department. -Don’t go back in the house.
Home run – Advance four bases.

What first aid should you do for a cut or scratch?
Answer: -Wash the wound with soap and water. -Applying antiseptic can help prevent infection -Apply a bandage to keep the wound clean.
Triple – Advance three bases.

What first aid should you do for a cut or scratch?
Answer: -Wash the wound with soap and water. -Applying antiseptic can help prevent infection -Apply a bandage to keep the wound clean.
Triple – Advance three bases.

What is first aid?
Answer: First Aid is the first thing that you do to help a person with a serious injury or illness. It is what you must do immediately.
Double – Advance two bases.

Give 2 examples of sports safety equipment.
Answer: Helmets, elbow pads, knee pads, shoulder pads, mouth guards, face guards, etc
Double – Advance two bases.

Should someone with a nosebleed sit up or lay down to try to stop the bleeding?
Answer: Have the person sit up and lean forward. Pinch the nostrils together to maintain pressure on the flow of blood.
Triple – Advance three bases.

If you want to talk to someone because you don’t have anything else to do, should you call 911?
Answer: No
Single – Advance one base.
In an emergency, what are four things we should try to be?

Triple – Advance three bases.

Name 2 things you could find in a first aid kit.

Answers: Bandages, scissors, tweezers, sterile pads, medicine, etc

Home run – Advance 4 bases.

Why is it important to wear safety equipment when we participate in sports?

Answer: Wearing sports equipment will help keep us from getting hurt.

Single – Advance one base.

What is a buddy?

Answer: A buddy is someone who goes where you go. It helps to have a buddy so that you don’t get lost. It is important to have a buddy when you are hiking and when you are swimming.

Home run – Advance 4 bases.

Yes or No, it is possible to put out a fire on someone else by using a blanket?

Answer: Yes

Single – Advance one base.

Name at least 2 ways to stop the spread of colds.

Answer:
- If you have a cold, stay away from other people.
- Get lots of rest
- Turn your head away from others when you sneeze or cough. Cover your mouth and nose.
- Wash your hands often.

Double – Advance two bases.

How long should you wash your hands with soap and water?

Answer: 10-15 seconds or enough time to sing “Happy Birthday” twice

Double – Advance two bases.

What’s the most important 3-digit number to remember in an emergency?

Answer: 911

Single – Advance one base.

Name one thing you can do be safe in a car.

Answer:
- Wear your seatbelt.
- Don’t talk to driver if you’re in heavy traffic.
- Do talk to the driver if the driver is tired.
- Lock the doors.
- Keep hands, head and feet inside the car.

Single – Advance one base.

Why is it important to STOP, DROP and ROLL when your clothing is on fire?

Answer:
If you keep moving (and don’t stop) the fire will grow. Dropping and rolling will smother and put out the fire.

Triple – Advance three bases.
What are the four things you should remember as you do first aid?

Answer:
1. Be strong.
2. Be calm.
3. Be clear.
4. Be careful.

Triple – Advance three bases.

How do you treat a person for shock?

Answer:
- Have him or her lie down
- Raise his feet slightly – unless he is injured.
- If it is cold, cover him. If it is hot don’t cover him.

Triple – Advance three bases.

How do you treat someone with a first degree burn?

Answer:
Put the burned area in cold water until the pain stops.

Single – Advance one base.

How can you keep from getting sunburned?

Answer:
Put on sunscreen lotion with a high SPF (sun protection factor) about 20 minutes before you’re in the sun. Also wear a hat, sunglasses and other protective clothing.

Single – Advance one base.

A Scout is brave. Why might it be hard to be brave in an emergency?

Answer:
You could be too scared or too panicked to even remember what to do.

Single – Advance one base.

If someone drinks poison, what should you do?

Answer:
Call 911 immediately. Tell them what the poison is and follow their directions.

Double – Advance two bases.

How can you get help? Who can you call?

Answer:
You can contact a grown-up, you can call the police or the fire department or you can call 911.

Single – Advance one base.

What first aid should you do for a cut or scratch?

Answer:
- Wash the wound with soap and water.
- Applying antiseptic can help prevent infection
- Apply a bandage to keep the wound clean.

Triple – Advance three bases.

What first aid should you give for a second degree burn?

Answer:
This is a burn where blisters form.

Double – Advance two bases.

What is a second degree burn?

Answer:
This is a burn where blisters form.

Double – Advance two bases.

How do you treat someone with a first degree burn?

Answer:
Put the burned area in cold water until the pain stops.

Single – Advance one base.

What is a third degree burn?

Answer:
The skin may be burned away. Flesh may be black. Leave clothes on, wrap him with blankets and call for an ambulance (call 911).

Home run – Advance four bases.
What is first aid?

**Answer:**
First Aid is the first thing that you do to help a person with a serious injury or illness. It is what you must do immediately.

*Double – Advance two bases.*

**True or False:**
Trying to be calm when you are giving first aid is a good thing to do, because other will stay calm too.

**Answer:**
True

*Double – Advance two bases.*

If someone is stung by a bee, what do you do?

**Answer:**
Scrape away a bee or wasp stinger with the edge of a knife. Don’t try to squeeze it out. Put an ice pack on it if there is pain and swelling.

*Single – Advance one base.*

**True or False:**
Do not apply ice to a snakebite.

**Answer:**
True.

*Single – Advance one base.*

How do you hold your hands when you’re going to do abdominal thrusts on someone who is choking?

**Answer:**
Make a fist with one hand just above his belly button. Cover the fist with your other hand.

*Double – Advance two bases.*

How can you keep from getting a tick?

**Answer:**
Wear long pants and a long-sleeved shirt when you are in the woods and fields that have ticks. Also button your collar.

*Single – Advance one base.*

What can you do to treat chigger bites?

**Answer:**
Try not to scratch them. There may be some relief by covering chigger bites with calamine lotion or clear fingernail polish.

*Double – Advance two bases.*

Single – Advance one base.

“Be careful” is something to remember when we do first aid. What does it mean?

Answer: As we help other people we need to be careful to make sure that we and others are safe as we offer help.

Double – Advance two bases.

Name one thing you can do be safe in a car.

Answer: Wear your seatbelt. Don’t talk to driver if you’re in heavy traffic. Do talk to the driver if the driver is tired. Lock the doors. Keep hands, head and feet inside the car.

Single – Advance one base.
Be Prepared Closing

Materials:
None

Cubmaster or Den Leader:
Being a hero does not mean that you must risk your own life. It can mean getting help, or making a phone call to 911 to get the police, fire department or an ambulance. The key is to be smart and be quick. Sometimes there isn’t much time. You can save a drowning person by pulling them in with a life ring, and not become a victim yourself by jumping in after them.

Many times an adult has been saved because a child knew how to call 911 in an emergency and get help right away.

You never know when or where emergencies will happen. In Cub Scouts, we can learn how to handle these situations. We don’t expect to get hurt and we don’t expect to need first aid, but we are prepared just in case. So, do your best to be prepared.
March Week 1
Home Assignment
(Webelos Scouts working on First Responder Adventure requirement for Webelos rank).

Requirement 7
Create and practice an emergency readiness plan for your home.

Emergencies can happen at any time – even in the middle of the night. What would you do if you woke up and smelled smoke or heard your smoke alarm going off? It’s important to have a plan.

Sketch a floor plan of your house or apartment. Figure out two possible escape routes from each room, and draw them on your floor plan. Now, decide on a place away from the building where everyone can meet once they are outside. Discuss your plan with your family, and practice what you would do in an emergency.

Here is an example:

Discuss these questions with your parent:
- Are our smoke alarms working?
- Are our windows easy to open? How could we get out through windows that don’t open?
- Are their rooms on a second floor or higher? Should we buy escape ladders? Does our building have a fire escape?
- Would anyone in the family need special assistance in an emergency?
